

Refreshing Slack & TimeFinder Token Guide

This document provides step-by-step instructions for re-authenticating the Slack CLI and updating browser-session tokens for the [TimeFinder](#) tool.

Re-authenticating the Slack CLI App:

Download here: <https://docs.slack.dev/tools/slack-cli/>

1. Clear old sessions and log back in:

```
slack logout  
slack login
```

2. Verify active accounts

```
slack auth list
```

3. Generate a User Service Token

```
slack auth token
```

4. Copy the `/slackauthticket` command shown on-screen and paste it into any Slack channel or DM.

5. Approve the prompt, enter the generated challenge code back into your terminal, and copy the output token starting with **xoxp-**.

6. Test your token, E.g.:

```
export SLACK_TOKEN="xoxp-YOUR-COPIED-TOKEN-HERE"  
slack api conversations.list --token $SLACK_TOKEN
```

Setting Up TimeFinder (xoxc- Token + d Cookie)

Because standard user tokens may lack specific workspace scopes for direct messages and private channels, TimeFinder uses your active Slack browser session credentials (xoxc- token + d cookie).

Retrieve the `slack_d_cookie`:

1. Open Google Chrome and log into your company's Slack workspace:
`https://vastdata.slack.com/`
2. Open Developer Tools (F12)
3. Navigate to: Application tab -> Storage -> Cookies -> `https://app.slack.com`
4. Locate the cookie named "d".
5. Copy its entire value (**xoxd-**).
 - o Key Name: slack_d_cookie

Retrieve the slack_token:

1. In Developer Tools, switch to the Network tab.
2. In the filter bar, type `slack.com/api` (or click on any active API request in the list).
3. Click on an API request and open the Payload tab (or check under Form Data).
4. Locate the token parameter and copy its value (starts with **xoxc-**).
 - o Key Name: slack_token

Update the TimeFinder Credentials File

1. Open or create the local credentials file located at:
`~/.timefinder_cache/slack_credentials.json`
2. Paste and update your tokens, E.g.:

```
# ~/.timefinder_cache/slack_credentials.json
{
  "slack_token": "xoxc-XXXXXXXXXXXXXXXXXXXXXXXXXXXX",
  "slack_d_cookie": "xoxd-XXXXXXXXXXXXXXXXXXXXXXXXXXXX",
  "channels": {
    "channel-one": "C09Q0DRBCC",
    "channel-two": "C06M4ERRRCT",
    "colleague": "D0APB6ZLR9S"
  }
}
```
